Dear Sirs,

My firm has been an unwilling "hostage" of Micro\$oft's monopoly for 7 long years, and it is our sincere conclusion that the more we pay for 'buggy' software and upgrades, the less we actually get!

We will now finally make the transition to wonderful, trustworthy LINUX as opposed to Micro\$oft, who makes unreliable, unpredictable, and expensive 'bloated' software. When complaining about numerous 'bugs' and annoyances, they have the nerve to claim they are actually 'wonderful features'. This would not be possible, if there was some competition on the desktop, and not only on the server market. We do believe Mr. Gates & Co. have made a tremendous destructive impact on the software market, and they should be severely punished for falsifying evidence in court. (Contempt for court.)

Yours sincerely
NAVAL Systems & Electronics A/S
